

Perinatology Clinic of Etlik Zubeyde Hanim Women's Health Care, Training and Research Hospital, University of Health Sciences is dedicated to providing the optimum antenatal care throughout your pregnancy. We have an experienced team in the field of high risk pregnancies. Our maternal-fetal medicine obstetricians work carefully to minimize the adverse outcome risk for both mother and baby.

Our department offers care by evaluating, diagnosis, treatment and monitoring high risk pregnancies. We conduct a special antenatal care program for pregnancies complicated with maternal diseases (diabetes, hypertension, cardiac disease, rheumatoid diseases, etc.) fetal abnormalities (structural malformations, genetic disorders, intrauterine growth restriction, etc.) and placental anomalies (placenta previa, placenta accreta, etc). We aim to provide the optimum management strategies for a healthy mother and baby during pregnancy and labor together with postpartum period.

Our program offers

- Care and counseling for patients with a history of recurrent pregnancy loss
- Care for mothers with health problems prior to pregnancy
- Diabetes mellitus management
- Multiple pregnancy follow-up
- Management of obstetric complications such as preterm delivery, preeclampsia and intrauterine growth restriction
- Prenatal diagnosis of fetal abnormalities with advanced ultrasonography
- Invasive procedures for diagnosis (chorionic villus sampling, amniocentesis, cordocentesis) and treatment (red cell transfusion, vesico-amniotic shunting, etc.)

Etlik Zubeyde Hanim Women's Health Care, Training and Research Hospital is proud to offer an expanded obstetrics service to high risk pregnancies. You can contact us for further information.
