

Department of Gynecology/Urogynecology

The Department of Gynecology/Urogynecology offers comprehensive gynecological surgical care, including a wide range of evidence based-diagnostic evaluation and treatment options with a scale of routine testing to the most advanced diagnosis and treatment.

Our gynecologic surgery specialists have expertise in general gynecology, minimally invasive surgery (both laparoscopy and hysteroscopy), urogynecology, pelvic reconstructive surgery and transgender health. We provide surgical care for adults, and effort to take the least invasive approach to surgery whenever possible, so that patients can successfully recover in their lives with less risk of complication. We offer our experience in caring for the most challenging gynecological patients in our region and the surrounding area.

Our department has a great role in the residency program recognized as one of the finest not only in the region but also in the whole country. With the thought that minimally invasive surgery is now widely accepted, and training the residents to perform better laparoscopic procedures is essential, our laparoscopic training room was built and designed in April 2016. Both our residents and residents and experts from other hospitals could take advantages of the training room. A certificate, designating the proficiency of the endoscopic surgery skills of the physician including theoretical knowledge and practical lab skills, is given at the end of the programme.

The department is equipped with up-to-date ultrasound machines, staffed by remarkable clinicians fully expertised in diagnosis and management of each patient from reproductive ages to menopausal ages. Our outpatient clinic welcomes and treats about 100.000 patients within every year. Our Urodynamic Unit offers comprehensive urodynamic tests assessing the function of the bladder and urethra, and treatment for people suffering from urinary incontinence, and works synchronously with the department. The patients are referred to the outpatient Colposcopy Unit if any abnormal cervical screening is detected.

All patients suffering from benign gynecologic conditions are welcomed.
